一、题目说明

11.Container With Most Water, 这个题目难度是**Medium**。

二、我的做法

乍一看,简单啊,两个for循环就可以了,我在本地写的。

```
#include<iostream>
#include<vector>
#include<math.h>
using namespace std;
class Solution{
    public:
        int maxArea(vector<int> &height){
            int max = 0;
            int currHeight=0;
             for(int i=0;i<height.size()-1;i++){</pre>
                 for(int j=i+1;j<height.size();j++){</pre>
                     currHeight = height[j]>height[i] ? height[i] : height[j];
                     int area = currHeight*(j-i);
                     max = max < area ? area: max;</pre>
                 }
             }
            return max;
        }
};
int main(){
    Solution s;
    vector<int> v = \{1,8,6,2,5,4,8,3,7\};
    cout<<(49==s.maxArea(v));</pre>
    return 0;
}
```

提交后运行,居然Time Limit Exceeded是,好伤心。

里面给了一个非常长的数据,实际上我本地运行时间大概2-3秒吧。不过既然错了,我的重新思考一下。

这里面最大的问题在于"不动脑子"直接用双重循环,其实单重循环就可以的。

三、改进

首先用单重循环实现,时间20秒,原谅我贴出来测试代码居然这么长。

```
#include<iostream>
#include<vector>
using namespace std;

class Solution{
   public:
     int maxArea(vector<int> &height){
```

```
int left=0,right=height.size()-1,maxarea=0,currarea=0,currheight;
            while(left<right){</pre>
                currheight = height[left]>height[right]?height[right] :
height[left];
                currarea = currheight*(right-left);
                if(currarea>maxarea){
                    maxarea = currarea;
                if(height[left]>height[right]){
                    right--;
                }else{
                    left++;
                }
            }
            return maxarea;
        }
};
int main(){
    Solution s;
    vector<int> v = \{1,8,6,2,5,4,8,3,7\};
    cout << (49 == s.maxArea(v)) << end1;
```

继续优化,到16秒,居然i++的性能比 i+=1性能差着多?

```
#include<iostream>
#include<vector>
#include<math.h>
using namespace std;
class Solution{
    public:
        int maxArea(vector<int> &height){
            int left=0,right=height.size()-1,maxarea=0;
            while(left<right){</pre>
                maxarea = max(maxarea,min(height[left],height[right])*(right-
left));
                if(height[left]>height[right]){
                     right-=1;
                }else{
                     left+=1;
                }
            }
            return maxarea;

};
int main(){

    cout<<(49==s.maxArea(v))<<endl;</pre>
    return 0;
}
